

Activity- Data Analysis

We are using **Automobile Dataset** for data analysis. This Dataset has different characteristics of an auto such as body-style, wheel-base, engine-type, price, mileage, horsepower, etc.

1. From the given dataset print the first and last five rows.
2. Clean the dataset and update the CSV file.
3. Find the most expensive car company name.
4. Print All Toyota Cars details.
5. Count total cars per company.
6. Find each company's Highest price car.
7. Find the average mileage of each car making company.
8. Sort all cars by Price column.
9. Concatenate two data frames using the following conditions.
